SNOWER

www.snower.fi

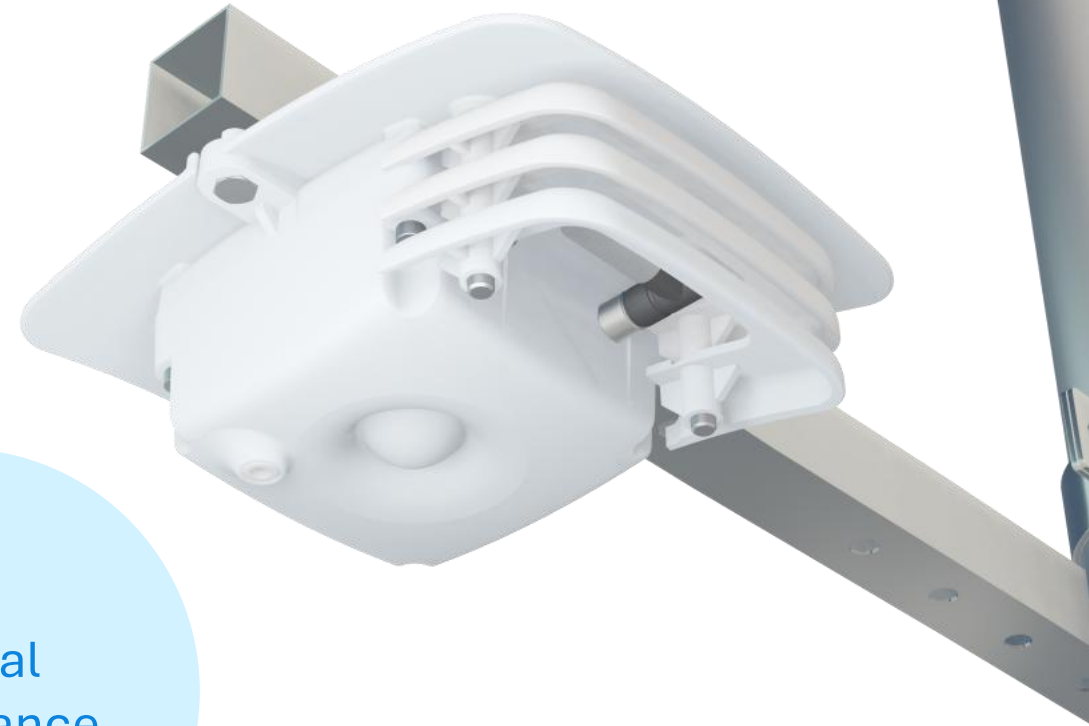

The Solution

- Snower is a **Snow Measurement System** that for an affordable price works as battery powered weather station that competes against the big and expensive devices currently on the market.
- Snower gives crucial and accurate information on snow by using sensor data combined with Algorithms/AI
- Snower works in tuff conditions in areas that normal weather stations can't reach.

Cost-
Effective

Easy to
install

Minimal
maintenance

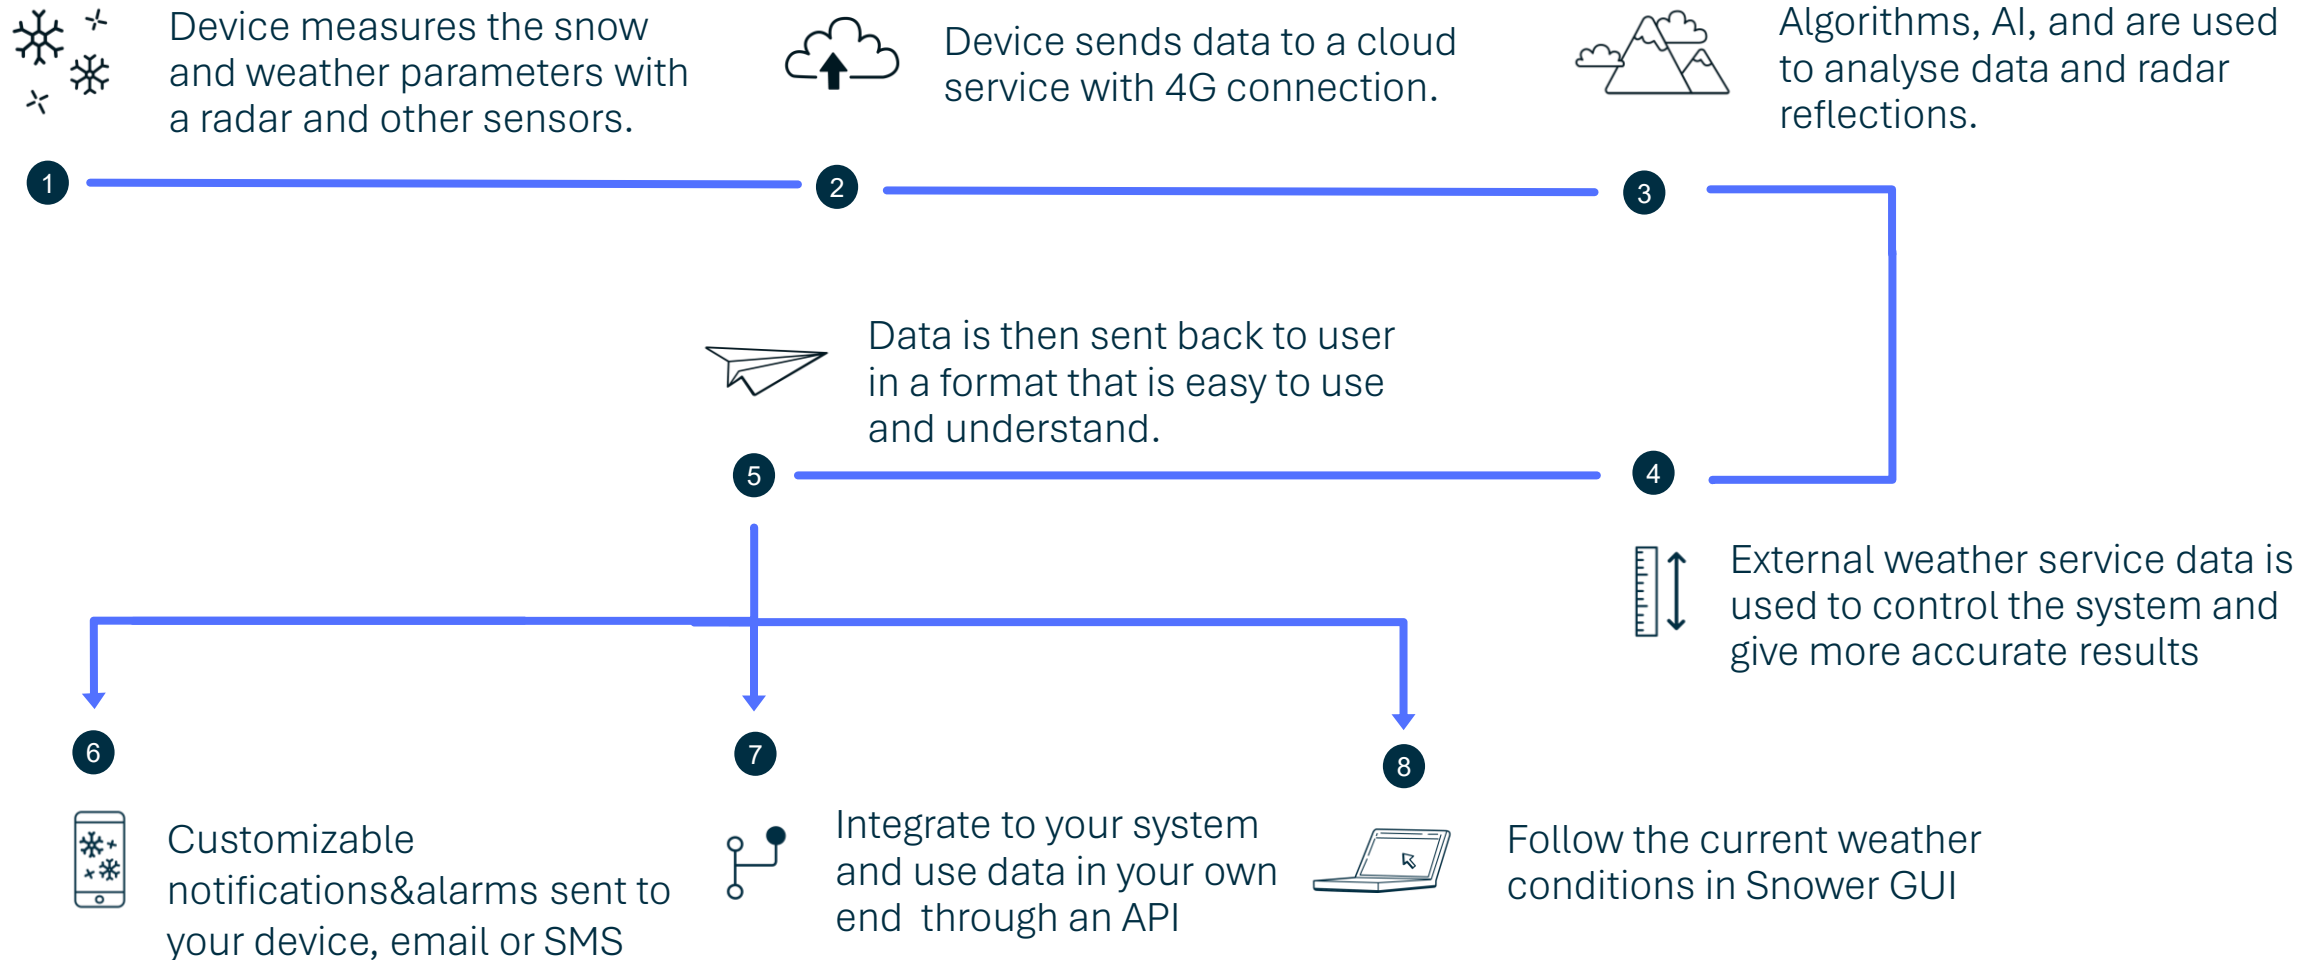

made in Finland

How it Works

Snower is adapted to your needs

Two Device Set-Up for Road Management

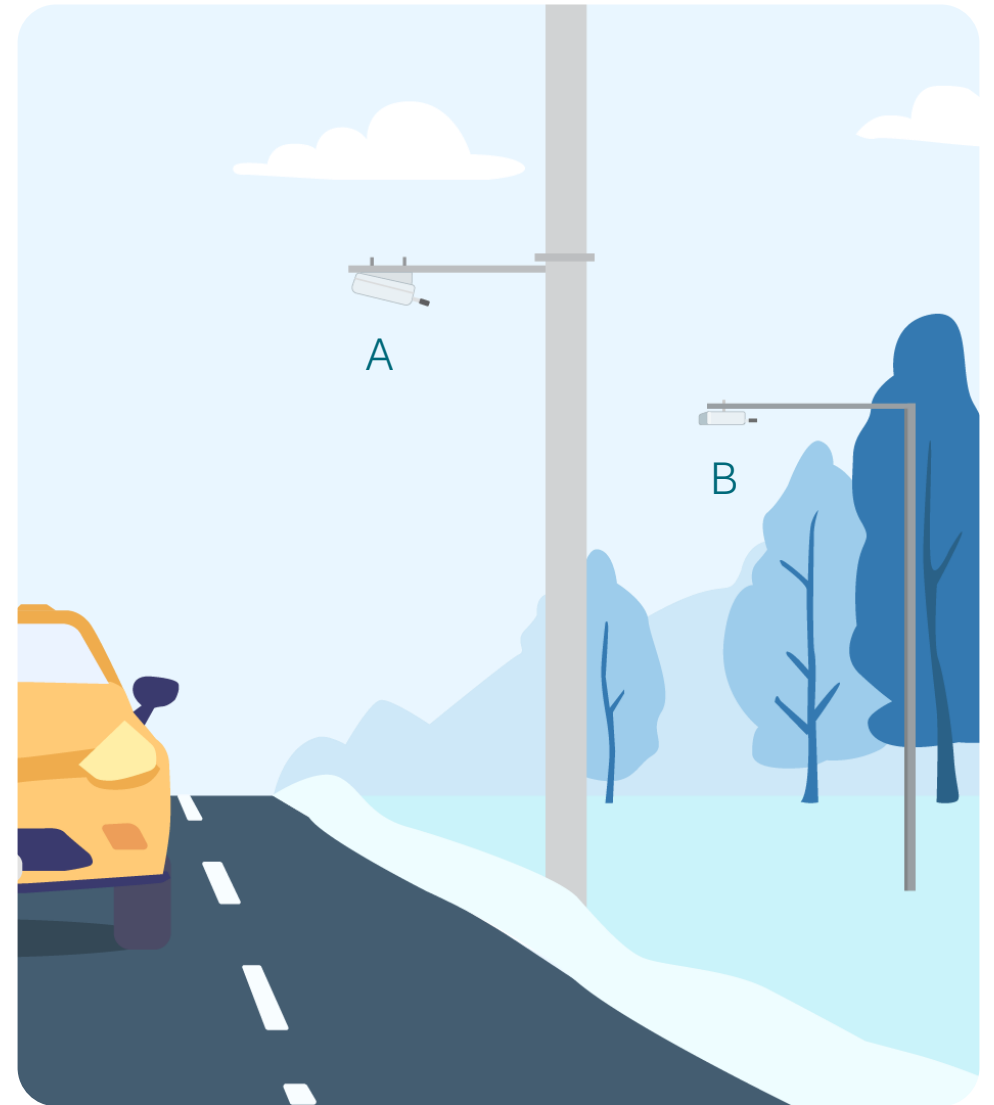

Problem

- Snow accumulates unevenly on the road surface and moves around due to passing vehicles
- Enables to have better understanding of not only one data point but larger area

Solution

- ✓ Device A - Automatic detection on road condition
 - Is there snow or not / Condition of the road
- ✓ Device B - Snowfall amount detection
 - Exact amount of snowfall
- ✓ Synchronization between the devices
 - Device A detects the last snow removal and
 - Device B's calculation of snowfall is synchronized to that
